Need to set up yum repository for locally-mounted DVD on Red Hat Enterprise Linux 9

SOLUTION VERIFIED - Updated November 15 2023 at 12:26 AM - English

Environment

- Red Hat Enterprise Linux 9

Issue

- How to set up yum repository to use locally-mounted DVD with Red Hat Enterprise Linux 9 ?
- Would like to upgrade server from RHEL 9.x to RHEL 9.y
- Have a secure environment that will never be connected to the internet, but still needs to be updated
- Is there a way to update the packages on server, with no satellite server and servers disconnected from internet
- How to apply offline patches for Red Hat systems using Binary DVD ISO ?
- How do I create a local repository in RHEL 9

Resolution

Note Refer to "How do I set up an up2date or yum repository from a locally-mounted DVD on Red Hat Enterprise Linux?" for other OS versions.

- Download the 'Red Hat Enterprise Linux 9 Binary DVD' from the Customer Portal which is approximately 8GB

- Mount the RHEL Binary DVD ISO to a directory such as /mnt/disc, e.g.:

```
# mkdir -p  /mnt/disc
# mount -o loop rhel-baseos-9.0-x86_64-dvd.iso /mnt/disc
```

- If you use DVD media , you can mount it as follows,

```
# mkdir -p  /mnt/disc
# mount /dev/sr0  /mnt/disc
```

Note: The Warning `mount: /mnt/disc: WARNING: source write-protected, mounted read-only.` is expected.

- Create the repository file with the correct path where the DVD or ISO is mounted,

```
# vi /etc/yum.repos.d/rhel9dvd.repo
[BaseOS]
name=BaseOS Packages Red Hat Enterprise Linux 9
metadata_expire=-1
gpgcheck=1
enabled=1
baseurl=file:///mnt/disc/BaseOS/
gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-redhat-release

[AppStream]
name=AppStream Packages Red Hat Enterprise Linux 9
metadata_expire=-1
gpgcheck=1
enabled=1
baseurl=file:///mnt/disc/AppStream/
gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-redhat-release
```

- Clear the cache and check whether you are able to get the packages from this DVD repository,

```
# yum clean all
# yum repolist
```

- If are no errors, then you can consider Installing/Updating the Packages with,

```
# yum install <Package-Name>
# yum check-update
# yum update
```

Product(s) Red Hat Enterprise Linux Red Hat Enterprise Linux for x86_64

Component dnf installation rpm yum **Category** Configure

Tags install rpm update yum
